Dear Protex 10 mil Customers,

The current supplier informed us this past September that our next 10 mil order (that was due to arrive in September) will not be shipping in 2021. Due to this unfortunate delay and in order to minimize the impact on our customers production schedules, we worked very quickly and with the cooperation of some of our customers, qualified a new 10 mil paper. This 10 mil paper has been manufactured to match our existing specifications on our tech data sheets but here will be cosmetic differences. The color of the new paper is a lighter color than the previous paper which has no bearing on the performance of the final product. Our adhesives are bonding well with the paper and yielding tack levels within spec. The technical information for the new 10 mil paper is in the table below.

Physical Property	Units	Typical Values
Basis Weight	Lbs./3000ft	100
Thickness	Mils	9
Density	Lbs./Mil	11
Tensile, Dry (MD / CD)	pli	40/18
Elongation (MD / CD)	%	6/15
Taber Stiffness	TSU	15/5
Moisture	%	4.0

The new supplier has confirmed our purchase orders and have given us a delivery date in December. If you need product prior to December, Protex 10V and Protex 10VS may be substituted for 20V and 20VS. It is more costly but if the adhesive is what the customer prefers, this product should fit the application and provide additional protection. Please reach out to Camille for pricing if you would like to explore this option.
